

ABSTRACT OF THE DISCLOSURE

A disposable protective cover intended to be applied to shared medical, physical therapy and physical equipment, devices and accessories to aid in the prevention of transference of bacteria and viruses among user of such equipment. The covers are produced formed from a cohesive coated laminated non-porous Polyethylene plastic foam pad, non-latex rubber material that is produced with an even coat of pressure sensitive removable restickable self-adhesive applied completely over the back surface of the material on the equipment-contacting side of the pad allowing a non-slip cover and provides sanitary surface on the patient contact surface. The protective covers are provided in sheet or roll form for use with or without a dispenser.
